| SO11045 | <p>SO11045 M.C.S. ENTRIES = ++PTF (SO11045)</p> <p>BATCH JOB SECURITY INHERITANCE WITH ACF2</p> <p>PROBLEM DESCRIPTION: When running CA Mainframe Application Tuner with CA ACF2 as the security manager, batch reporting jobs will fail if the ACF2 default batch logonid does not have proper access authority to the data sets in the reporting job.</p> <p>SYMPTOMS: ACF2 security violation messages ACF99913 and ACF95913 may appear, or ACF01016 may appear instead. These are all indications of a security problem. In addition, abend S08B, with reason code x'C', is also likely. This completion code indicates that the job does not have the proper security authorization to the requested DIV object, which, in this case is the MAT Global and/or User Information File (GIF/UIF).</p> <p>IMPACT: Batch reporting job execution fails.</p> <p>CIRCUMVENTION: Add an ACF2 /*JOBFROM uuuuuuuu control statement, where uuuuuuuu is the user ID, to the batch job card in each affecter user's Profile. Then execute the JOBcard command as indicated at the top of the Profile Parameters panel (TUNX1600).</p> <p>PRODUCT(S) AFFECTED: CA MAT base component Version 11.0 CA MAT base component Version 12.0</p> <p>Related Problem: MATUNE 861 Copyright (C) 2019 CA. There is no impact to non-ACF2 users. If you do use CA ACF2, be aware that this PTF will cause a /*JOBFROM statement to be added to the jobstream for all jobs submitted by the MAT server. The logonid supplied will be that of the MAT ISPF Client user. Please review your CA ACF2 setup to verify that the MAT ISPF Client user has the proper security authorization to execute the job. </pre> |
