Service	Details
LU00783	LU00783 M.C.S. ENTRIES = ++PTF (LU00783) EZYEDIT CLONE COMMAND IGNORES COMMAND LINE INPUT PROBLEM DESCRIPTION: The EZYEDIT CLONE command ignores command line input. This can result in unexpected behavior of the CLONE command. For example, if the user types CANCEL on the command line of the CLONE output data set prompt panel and hits enter the CLONE operation is performed when the user expected it to be canceled. This can cause an output data set to be unexpectedly overwritten by the CLONE input data set. The CLONE command is modified to accept input on the command line field and cancel the operation if CANCEL (can be abbreviated to 3 characters; CAN) is enter on the command line. An error message is issued for unrecognized input on the command line. In addition, the CLONE/COPY/MOVE EZYEDIT commands are modified to force the user to enter a data set name in the 'OTHER Partitioned or Sequential Dataset' field. This change is made to eliminate the possibility of inadvertently overlaying the data set that was last accessed by the EZYEDIT user (and now saved in the Project/Group/Type fields). SYMPTOMS: The EZYEDIT CLONE command ignores command line input. IMPACT: EZYEDIT CLONE, MOVE, and COPY command users may be impacted by this change. CIRCUMVENTION: Use the PF3 on the prompt panel to cancel the a CLONE operation. PRODUCT(S) AFFECTED: CA PDSMAN PDS Library Management Release 7.7 Related Problem: PDSM 13336 Copyright (C) 2021 CA.
