LU00877	LU00877 M.C.S. ENTRIES = ++PTF (LU00877) NEW ERROR MESSAGE FOR DCMT QUIESCE COMMAND FAILURE PROBLEM DESCRIPTION: A DCMT QUIESCE AREA/SEGMENT/DBNAME command may fail because the MAX TASKS setting will not allow another task to start. Prior to this PTF, no error message was issued in this situation. This PTF adds the following new message when this situation is encountered: DC200286 QUIESCE command task not started - MAX TASKS exceeded SYMPTOMS: In either batch or CV mode, if a DCMT QUIESCE AREA/SEGMENT/DBNAME is issued and a task cannot be started, no message is issued. IMPACT: User is uncertain if the command has been successfully received and if the QUIESCE will be performed as requested. CIRCUMVENTION: If DCMT QUIESCE commands are not being processed as expected, use the 'DCMT DIS ACT TASKS' command to display the current setting for MAX TASK. You may temporarily update the MAX TASK value on an active system with the 'DCMT VARY ACT TASK MAX TASK nnn' command. To permanently increase the MAX TASK setting, change MAX TASK value in your IDMS SYSGEN SYSTEM statement. Service	Details
	<pre> REQUIRED +-----+-----+ ***** * STEPS TO PERFORM * ***** After installing this PTF, please use the IDMSDDDL utility to update your SYSTEM dictionary's message area with the input in source member DC200. Please note using this member will result in the update of all messages contained within DC200. You may optionally decide to only update the specific message associated with this correction. To do this simply include message DC200286 as input to the IDMSDDDL utility. The source will be in the SMP/E CAGJSRC library.).</pre>

Service	Details
LU00953	LU00953 M.C.S. ENTRIES = ++PTF (LU00953) PROGRAM CHECK IN RHDCDEAD WHEN VICTIM IS NO LONGER WAITING PROBLEM DESCRIPTION: When the deadlock manager is attempting to resolve multiple deadlocks on a single CV, it is possible for an I/O request to cause RHDCDEAD to wait. When this happens, it is possible that a task that was previously waiting on an ECB may have had its wait resolved and be running again. During the victim selection process, if the ECB has changed, or is no longer valid, a program check may occur in RHDCDEAD. SYMPTOMS: Program checks in RHDCDEAD may occasionally occur. IMPACT: This problem happens infrequently when there are a large number of deadlocks happening on a single CV. A program check in RHDCDEAD will cause the task for service driver RHDCDEAD to abend and then be re-attached. CIRCUMVENTION: There is no work around for the program checks in RHDCDEAD. Apply the provided APAR to correct them. PRODUCT(S) AFFECTED: CA IDMS Base Option Version 19.0 Related Problem: IDMS 13250 Copyright (C) 2021 CA. All rights reserved.
