Service	Details
	NOTE With this maintenance, the default deployment method of the CEM web application files has been modified. Previously symbolic links were used to link the target SMP USS directory files to the tomcat/webapps directory. Now instead of leveraging symbolic links, the maintenance going forward will copy the needed files from the SMP directory to the webapps directory. If your deployment process involves creating symbolic links, you will need to account for this.). PARM(PATHMODE(0,7,7,5)) SHSCRIPT(CEMETOMS,POST) . PARM(PATHMODE(0,7,7,5)) SHSCRIPT(CEMETOMS,POST) .
