S010458	S010458 M.C.S. ENTRIES = ++PTF (S010458) POSSIBLE SYSTEM OUTAGE DUE TO LATCH CONTENTION PROBLEM DESCRIPTION: It is possible for a task to go thru EOT when multiple events were in flight simultaneously, resulting in process block cleanup that may miss the fact that one of the processes held a latch. Once the latch is left on it will be held until the address space terminates. If it is a latch used to protect SQL tables, then depending upon automation present, this may cause all automation to cease once all process blocks are held. 	The GAV2CMDR REXX which processes the GAV2CMD commands, may fail with compiler work space overflow errors depending on how many SSMGAV2 resources are defined. The OPSVASRV GETLIKE command was selecting all variables, rather than a subset of variables, for resources belonging to a move group.	
	SYMPTOMS:	
	OPS30920 RUNNING GAV2CMDR LINE 478: COMPILER WORK SPACE OVERFLOW messages issued when GAV2CMD MGROUP command issued.	
	IMPACT:	
	The GAV2CMD MGROUP command will fail.	
	CIRCUMVENTION:	
	Update the GAV2CMD RULE to increase the work space size when calling GAV2CMDR ex:
