ENTRIES = ++PTF (S012369)</p> <p>INABILITY TO TURN OFF THE ADDITIONAL SARBCH SECURITY</p> <p>PROBLEM DESCRIPTION:</p> <p>After applying PTF S010882, which provides additional internal security validation for the SARBCH /BPRINT, /CHANGE, /DELETE, /EPRINT, /INDEX, /LOAD, /PERM, /PRINT, /PRINTIDX, and /PRINTJOB control statements, SARBCH may end with a non-zero return code. Although not a defect, this change in product behavior may have a significant impact on the existing customer's environments and security configurations. as such, we'd like to rework the PTF to also provide a way for customers to revert to the original product behavior (without using additional security validation for SARBCH), if desired. Also give the client the ability to Enable (if desired) the new validation code at a later date after they make all necessary rule and definition changes needed in their environment.</p> <p>SYMPTOMS:</p> <p>When the problem described in the description occurs, the following message is displayed:</p> <p>SARBCXX User not authorized to access sysout/job.</p> <p>IMPACT:</p> <p>Customer may experience a problem with current operation of CA-View SARBCH utility due to non-zero returned code.</p> <p>CIRCUMVENTION:</p> <p>Restore PTF S010882 if applied.</p> <p>PRODUCT(S) AFFECTED:</p> <p>CA-View Version 14.0</p> <p>Related Problem:</p> <p>VIEW 2104</p> <p>Copyright (C) 2020 CA.
