SO11500	SO11500 M.C.S. ENTRIES = ++PTF (SO11500) ENHANCEMENT: THE JCLCHECK REST API PROBLEM DESCRIPTION: JCLCheck REST API is a microservice to the CA JCLCheck Mainframe component. The microservice leverages the Open Mainframe Project Zowe Spring Boot REST API Sample. The REST API is an alternative way of interacting with JCLCheck. It allows z/OS users to validate the accuracy of Job Control Language (JCL). Mainframe users can leverage the REST API independently or they can use the CA JCLCheck Workload Automation Plug-in for Zowe CLI (JCLCheck plug-in) which communicates via the REST API. For customers interested in managing this and other product services, the Zowe API Mediation Layer can discover, catalog, scale etc. the JCLCheck REST API automatically making it available to the Zowe CLI plug-in. To learn more about Zowe CLI and Zowe API-ML, visit Zowe.org For more information on JCLCheck, visit https://techdocs.broadcom.com/ and search for CA JCLCheck Workload Automation. In the JCLCheck documentation, search for 'Install, Configure, and Deploy the JCLCheck REST API' for implementation and usage details. 	<pre> REQUIRED product documentation +-----+-----+ ***** * STEPS TO PERFORM * ***** This change adds a new REST api to JCLCheck to allow JCL to be validated from non-z/OS platforms. Once the PTF is applied, additional steps are required to impliment the new api. This involves copying elements to USS librairies to make them available for excution and customizing required options. Implimentation is only required if you are planning to use this feature. For more information on JCLCheck, visit https://techdocs.broadcom.com/ and search for CA JCLCheck Workload Automation.
