This utility processes the following SMF records:</p> <ol style="list-style-type: none"> 1) Standard CA Spool SMF record, Subtype 11. 2) Standard CA Spool SMF record, Subtype 12. 3) Type 6 records produced by CA Spool when SMF=SP6 is specified. <p>For efficiency, it is recommended that the input to ESFSMFRP be filtered so that it includes only records whose SMF type you wish to include in the output file. IBM provides utilities such as IFASMFDP and IFASMF DL for this purpose. Sample JCL for the IFASMF DL utility can be found in CBQ4JCL(ESFSMFFE).</p> <p>Sample JCL for ESFSMFRP can be found in CBQ4JCL(ESFSMFRP).</p> <p>In addition, extended formats of all three SMF records listed above are now written when new CA Spool Initialization parameter SMFEXT is specified.</p> <p>It is also possible to limit which of the standard CA Spool SMF record subtypes will be written when the new CA Spool Initialization parameter SMFSBTYP is specified. In any SMFSBTYP value is specified, only the subtypes specified will be written. This parameter may be specified multiple times to write multiple subtypes.
