SO12480	SO12480 M.C.S. ENTRIES = ++PTF (SO12480) REFRESH COMMAND ORPHANS SP 241 COMMON STORAGE AFTER R099162 PROBLEM DESCRIPTION: With R099162 applied a MODIFY ACF2 command to do a REFRESH will orphan subpool 241 common storage. The problem occurs on REFRESH(ALL), REFRESH(OPTS) and REFRESH(SAFDEF) commands. SYMPTOMS: Increase in subpool 241 common storage utilization following MODIFY ACF2 REFRESH commands. For REFRESH(OPTS) the orphaned blocks are of size x'400' and begin with the name of the default STC ID and/or the default batch ID if they are defined. For REFRESH(SAFDEF) the orphaned blocks are of size X'1000' and begin with an eyecatcher of "CELL". For REFRESH(ALL) the orphaned blocks vary in size and content. SO13034	SO13034 M.C.S. ENTRIES = ++PTF (SO13034) ACFESAGE MISHANDLES DB2 RESOURCE RULES WITH LONG \$KEY PROBLEM DESCRIPTION: The CA ACF2 for z/OS utility ACFESAGE mishandles compiled DB2 resource rules which have long \$KEY values. The entire \$KEY is moved to the RSRC_KEY in the type 0500 record without checking to see if the length of the \$KEY exceeds the length of the RSRC_KEY field (40 bytes). This erroneous move may cause invalid data to be reported in the type 0500 record fields that follow RSRC_KEY, such as RSRC_MEMBER, RSRC_OWNER, etc. This fix adds a new field called RSRC_FULLKEY at the end of the 0500 record which will be populated with the full DB2 resource \$KEY. This fix also corrects a problem which causes binary data to show up in the 0500, 0510, 0520 and 0530 records for DB2 rules with long \$KEY values. The 4 bytes of binary data are now replaced with a character sequence number corresponding to the binary data in the VSAM key. SYMPTOMS: Invalid data in the type 0500, 0510,0520 and 530 ACFESAGE flat file records for DB2 resource rules with long \$KEY values. IMPACT: ACFESAGE type 0500,0510, 0520 and 0530 records are invalid CIRCUMVENTION: None PRODUCT(S) AFFECTED: CA-ACF2-MVS Version 16.0 Related Problem: ACF2MS 10416 Copyright (C) 2020 CA. A second problem symptom is an overlay of subpool zero storage. The problem is evident if the length of the OMVS profile record is very large (i.e. over 2048 bytes) and the INFO/RULES database record length is 4K. In order for the OMVS profile record to exceed 2048 bytes it must contain very long HOME and OMVSPGM fields. SO13598	SO13598 M.C.S. ENTRIES = ++PTF (SO13598) OVERLAY WITH TAMZ ELEVATION TO ROLES AFTER SO10599 PROBLEM DESCRIPTION: There is a possibility of getting subpool=252, key=0 storage overlay when using TAMZ to elevate to a CLASS that contains a ROLENAM. In order for this to occur the user being validated needs to have at least 1 ROLE defined to them prior to being elevated to a CLASS or CLASSES with a ROLENAM in it. This userid must be used in a cross memory SAF FASTAUTH request for a resource that has a \$ROLESET rule written for it. The overlay will be for a length equal to the number of ROLES the user started with times 12(x'C'), give or take 4 bytes. SYMPTOMS: The symptom could be almost anything depending upon what storage got overlaid. IMPACT: Could cause a site to have to IPL depending upon what is overlaid.
