SO13977	SO13977 M.C.S. ENTRIES = ++PTF (SO13977) PXX DUMP AND RC 13(023) IN MUFPLEX DURING LPAR SHUTDOWN PROBLEM DESCRIPTION: In MUFplex mode B with two active members running on different LPARs, the surviving member can receive RC 13(023) (command issued in invalid sequence) after the other member has left the MUFplex. This can occur in connection with a shutdown of the LPAR where the member that left the MUFplex was executing. The RC 13(023) produces a PXX dump. The error is based on an invalid XCF message received by the surviving member. This solution will ignore the invalid message and thus eliminate the error code and ensuing PXX dump. SYMPTOMS: The surviving MUFplex member receives message: DB02405I - PXX START ***MPLXZ 0 13(023) MPLEX-0- and a dump is taken. IMPACT: There is no impact other than the overhead of a dump being produced. CIRCUMVENTION: None.
