SO13803	SO13803 M.C.S. ENTRIES = ++PTF (SO13803) WRONG RETURN CODE IN E2E LOGGING PROBLEM DESCRIPTION: Under certain circumstances, the wrong Return Code is used for E2E logging. SYMPTOMS: When an action fails due to a signout check, for example when an action is performed on an Element that is signed out to another user and the override signout option is not specified, the wrong return code may be logged for end to end logging. IMPACT: Misleading information is logged. CIRCUMVENTION: None. PRODUCT(S) AFFECTED: CA Endeavor SCM Version 18.0 CA Endeavor SCM Release 18.1 Related Problem: ENDBAS 7797 Copyright (C) 2020 CA. SO13911	SO13911 M.C.S. ENTRIES = ++PTF (SO13911) MOVE ACTION STARTS FROM SCRATCH DURING PACKAGE RE-EXECUTION PROBLEM DESCRIPTION: The problem occurs when package execution with move action fails on delete processor and package re-execution is performed. The problem is that package re-execution restarts all the move action parts even though some of them were completed during the first package execution. This is incorrect because restarted move action should skip the parts that were successful and start from the failed part. SYMPTOMS: Package re-execution after failed delete processor on move action restarts the whole move action instead of starting from the failed part. Re-executing the move processor can fail if the failed delete processor already deleted some outputs. IMPACT: This problem can cause an inability to successfully restart a package. CIRCUMVENTION: None PRODUCT(S) AFFECTED: CA Endeavor Software Change Manager, Version 18.0 CA Endeavor Software Change Manager, Version 18.1 Related Problem: ENDBAS 7799 Copyright (C) 2020 CA. SO14419	SO14419 M.C.S. ENTRIES = ++PTF (SO14419) ALLOC=COND FAILS ON 1ST STEPLIB DSN PROBLEM DESCRIPTION: The ALLOC=COND processor parameter fails when the first data set in a processor steplib concatenation is not allocated. SYMPTOMS: When the first data set in a processor step STEPLIB concatenation is not allocated and the ALLOC=COND parameter is specified for that DD statement, the STEPLIB data set(s) are not allocated to STEPLIB. IMPACT: An 806 ABEND may occur. CIRCUMVENTION: Ensure that the first data set in the STEPLIB concatenation is allocated. SO14512	SO14512 M.C.S. ENTRIES = ++PTF (SO14512) API/CSV LIST ELEMENT SLOWER WITH FILE EXTENSION INFO PROBLEM DESCRIPTION: API/CSV list element action can be slower after the new field "file extension" has been added to the API response block and CSV output. The solution for this problem improves the performance to a level very close to the original performance as it was before the "file extension" enhancement was introduced. SYMPTOMS: Worse performance of API/CSV list element action. The performance drop varies depending on the wildcarding of the element and location specified in the API request, the inventory structure and elements returned. In the best case it is not noticeable. In the worst case the elapsed time can increase around three times, CPU time around 4 times and EXCPs even up to 50 times. IMPACT: API/CSV list element action takes more time to finish with more resources consumed. CIRCUMVENTION: None.
