SO12639 (continued):

```
CTSMSGPR MLWTO'S ARE NOT PAIRED DUE TO WQERISS ON JES3
PROBLEM DESCRIPTION:
When an MLWTO is issued for a mount message such as an IEF233A, the
secondary messages are not associated(paired) with the original first
line of the IEF233A. In the joblog, any additional lines appear at
the end of the joblog when the job ends.
SYMPTOMS:
Odd behaviour noticed as the Multi-Line-Wto appears in the joblog
separated.
IMPACT:
This does not affect processing as the original mount message is
suppressed and the re-issued TMS00n/CTS00n appears on the console
normally.
CIRCUMVENTION:
None
PRODUCT(S) AFFECTED:
CA COMMON TAPE FUNCTIONS                                    Version 14.0
Related Problem:
