SO11360	SO11360 M.C.S. ENTRIES = ++PTF (SO11360) TMSPTRS - IGNORE ZZZDUMMY FILES CREATED DURING A CONVERSION PROBLEM DESCRIPTION: When converting from MVS/Catalog only data, dummy files will be created that might create a volume-chain. This results in dummy files (DSN=ZZZDUMMY) being created. When TMSPTRS runs, it attempts to update the DSN17 field with this dummy information. If SYSUT3 spans to multiple volumes, errors are reported that do not exist. SYMPTOMS: When TMSPTRS runs, it reflects ERR79 errors and generates TMSUPDTE control statements to for these ZZZDUMMY files. Analysis of reported errors show that no problems exist. IMPACT: If the DSN17 field is updated, the volume may receive a NS-12 the next time it is written too. Time is wasted attempt to analyze errors that do not exist. CIRCUMVENTION: Do not run TMSUPDTE with the output file created by TMSPTRS. Insure that SYSUT3 is only allocated to a single device. PROBLEM DESCRIPTION: Submit TMSCOPY as a started task when the IEFTMS9 TMS BACKUP REQUIRED message is issued to prevent a IEFTMS70 S7YY-104 abend. SYMPTOMS: IEFTMS70 S7yy-104 abends once the Audit dataset reaches its threshold. IMPACT: Updates to the CA 1 Audit dataset fail. CIRCUMVENTION: Run TMSCOPY to backup the TMC/AUDIT dataset. While this is not meant to replace existing scheduled executions of TMSCOPY, it can prevent an IEFTMS70 7yy-104 abend(s) if the Audit dataset threshold is met outside of the normally scheduled executions. Simply copy your TMSCOPY JOB to a PROCLIB used by JES. The member must be called TMSCOPY and it MUST be executed on the same system that issued the IEFTMS9 TMC BACKUP REQUIRED message. Please insure that TMSCOPY uses the SYSAFF JCL statement to accomplish this. Refresh the MPF member(SET MPF=nn) and the next time a IEFTMS9 TMC BACKUP REQUIRED is issued because the threshold warning level has been met, your TMSCOPY job will be submitted. SYMPTOMS: TMSCLEAN ends with RC=04 and LE=20 is reported for those volumes with ** IO ERROR ** as the data set name. IMPACT: If condition-code checking is performed, this may cause an alert to be issued because TMSCLEAN did not end with RC=00 as normal.
