Service	Details
SO14793	SO14793 M.C.S. ENTRIES = ++PTF (SO14793) MIMQUERY ABEND SOC4 MIMUTQRY GQSCAN SYSNAME=0 PROBLEM DESCRIPTION: When the MIMQUERY and GQSCAN features are active, a GQSCAN request specifying SYSNAME=0 (for an MII managed resource) is incorrectly processed by all systems in the MIMPLEX. SYMPTOMS: The returned buffer may have responses from all systems when only one system is expected. The MIMQUERY address space may produce an SVC dump: Dump Title: MIMQUERY R12.05 @ R096602 ; ABEND SOC4 Rsn=00000038 at MIMQYRQL.MIMUTQRY+07C4; Issuer=MIMQUERY As part of this PTF, two user abends were added to gather diagnostic information in the case of suspected logic errors: A U0069 RC0008 is issued when a remote system is building a buffer incorrectly. A U0069 RC0009 is issued when a local system is processing an incorrectly built buffer. IMPACT: The impact depends upon how the requesting application handles resources from an unexpected system. The abend is recoverable and a non-zero return code is passed back to the GQSCAN issuer. CIRCUMVENTION: The GQSCAN feature can be disabled until the PTF is applied. PRODUCT(S) AFFECTED: CA MULTI-IMAGE MANAGER Release 12.5 Related Problem: MI 298 Copyright (C) 2020 CA. All rights reserved.
