Service	Details
R093444	R093444 M.C.S. ENTRIES = ++PTF (R093444) API/CSV LIST ELEMENT PERFORMANCE IMPROVEMENT PROBLEM DESCRIPTION: The performance of the API and CSV List Element action can be improved in cases where the Element name is not fully wildcarded and SEARCH=NO is specified. SYMPTOMS: The original performance was reasonably good and, in most situations, problems are not apparent. The visibility of the problem increases with these factors: - Elements are searched for in a large number of subsystems. For example, when the location is fully wildcarded, including the Environment. - A small number of Elements are returned. For example, if the Element name is fully specified. - The API/CSV List Element action is called from an online application. This is because the user may need to wait a few seconds for a response, which is more noticeable than if the same action were executed in batch. IMPACT: Users can observe small delays in online applications using specific API/CSV requests. CIRCUMVENTION: None.
