The prefix typically includes information about the task that issued the message. This PTF adds support for a new CA_OPS_SYSLOG_MSG_PREFIX=NO YES environmental variable option that is specified in the ENVFILE file of the OPSSLGP Server. When CA_OPS_SYSLOG_MSG_PREFIX=YES is specified, USS Syslog Daemon messages written to OPSLOG include the message prefix. TSO users must get out of OPSVIEW. 5. Stop OPS/MVS. 6. If the system link pack area (LPA) contains any updated load module, you must refresh LPA by using MVS system command "SETPROG LPA" or some equivalent mechanism. 7. Start OPS/MVS. 8.
