SO15104	SO15104 M.C.S. ENTRIES = ++PTF (SO15104) TMSCLEAN SCRATCH COUNTS DO NOT INCLUDE VOLSEQ'S > 1. PROBLEM DESCRIPTION: Scratch counts that appear on TMSRPT-85 do not reflect the actual amount of scratches as volumes with a VOLSEQ greater than 1 were not included in the totals. SYMPTOMS: The number of scratched tapes listed in TMS REPORT-85 from TMSCLEAN do not reflect the total amount of unused scratch tapes and Current scratch tapes. The following entries on TMS REPORT-85 will now report all scratched volumes as well as by retention method. Previous scratched tapes unused Current scratch tapes Tapes are using JULIAN expiration dates Tapes are using LDATE control Tapes are using CATALOG control Tapes are using CYCLE control Tapes are using PERMANENT retention control IMPACT: Customers actually have more scratch tapes than appear on the report. CIRCUMVENTION: Use TMEVSNM to get an accurate count of scratch tapes. PRODUCT(S) AFFECTED: CA 1 Tape Management Version 14.0 Related Problem: 1 2366 Copyright (C) 2020 CA. All rights reserved. SO15247	SO15247 M.C.S. ENTRIES = ++PTF (SO15247) ENHANCEMENT TO ISPF PROBLEM DESCRIPTION: This ISPF enhancement actually contains 2 changes. First, when doing a Data Set Name lookup without using the MVS/Catalog, the DSN can use full pattern masking. The second enhancement has to do with a multi-volume/multi-file aggregate where the first secondary file starts on a secondary volume. When you display the first-volume, you will receive the option to enter "F" or "V" to list all the files (even when no secondary files actually exist on this specific volume). SYMPTOMS: Data Set Name lookups are limited to fully qualified or ending in a dash. And the option to enter "F" to list all secondary files only exists for a volume that actually contains secondary files. IMPACT: None, using a dash at the end of a DSN will still result in the same search results. CIRCUMVENTION: None ENHANCEMENT DESCRIPTION: You can now use pattern masking to lookup a partially qualified DSN. For example, you could now specify a Data Set Name such as -.BACKUP.- to get a list of all files with BACKUP as a qualifier. Also, when you look at a volume that is part of a multi-volume chain and does not actually contain secondary files but a later volume in the chain does; the option to list all the secondary files will still be presented.
