SO15755	SO15755 M.C.S. ENTRIES = ++PTF (SO15755) MAKE ALL LIKE PREDICATES RQAABLE TO EVALUATE FROM THE INDEX ENHANCEMENT DESCRIPTION: This enhancement passes LIKE predicates (that are not already converted to a short EQ predicate for a generic search) to the Compound Boolean Selection (CBS) facility where they can be evaluated from the traversal index. Reading the data area is considerably more expensive than the index, so when a large portion of rows are rejected by the LIKE predicate, this can be a big savings in resources. Also, if the LIKE predicate is under an OR, then none of the other predicates under the OR can be passed to CBS. S015947	S015947 M.C.S. ENTRIES = ++PTF (S015947) ENHANCEMENT: BTG1000 WITH RECENT DST CHANGES ENHANCEMENT DESCRIPTION: This product enhancement delivers an updated BTG member, BTG1000, for the CASYSTEMTABLES database. It includes the recent addition of the INDEX_FORMAT and GENERATION columns to the DIR_INDEX table delivered by S016036. The BTG1000 member is periodically redelivered incorporating Dynamic System Table (DST) enhancements which occur as part of the continuous delivery model. These changes can either be installed using the individual table's DST BTG member, or by using the base level BTG1000 member. PRODUCT(S) AFFECTED: CA Datacom/DB Release 15.1 Related Problem: DB 5708 Copyright (C) 2020 CA. All rights reserved. Run the following DBUTLTY function to prepare taking the DSTs offline: ACCESS STATUS=UTLTY,DBID=1000,USERS=WAIT 2. Followed by a DBUTLTY: COMM OPTION=CONSOLE,OPTION2='SYSTEMDBID_DELETE' 3. Followed by a DDUPDATE using the new BTG1000 member as input to catalog the new definition. </pre>)

Service	Details
	4. Followed by a DBUTLTY which allows MUF to resume DST activity with the new definition: <pre>ACCESS STATUS=WRITE,DBID=1000</pre> An example and details can be found in the "System Tables Reference" in the Datacom Core - 15.1 TechDocs space. Apply this SYSMOD using 'BYPASS(HOLDSYSTEM(ACTION))' . The entire process can be run at your convenience, any time the DST database can be closed. The existing Dynamic System Tables continue to function and return data, without cataloging the latest DST definition. If the entire DST database cannot be closed, the changed DST can be updated using the table level DSTDRI member in the process documented in the "Update the Dynamic System Tables Definitions" in the "System Tables Reference" in the Datacom Core - 15.1 TechDocs space.).
