LU00093	LU00093 M.C.S. ENTRIES = ++PTF (LU00093) B37 ABEND IN WEB SERVICES DYNAMICALLY ALLOCATED NDVROPTS PROBLEM DESCRIPTION: A B37-04 Abend can occur in the dynamically allocated temporary file for DDNAME NDVROPTS during Web Services startup. SYMPTOMS: Web Services abends with a B37-04, pointing to a temporary data set and DDNAME NDVROPTS. IMPACT: Web Services will not start. CIRCUMVENTION: The circumvention is to add a DD statement for NDVROPTS to the Web Services server JCL, for instance: //NDVROPTS DD DCB=(DSORG=PS,RECFM=FBA,LRECL=133), // UNIT=SYSDA,SPACE=(CYL,(2,1)) See member EAPISVR in the CSIQJCL data set. PRODUCT(S) AFFECTED: CA Endevor SCM Release 18.1 Related Problem: ENDBAS 12699 Copyright (C) 2021 CA. All rights reserved. LU00108	LU00108 M.C.S. ENTRIES = ++PTF (LU00108) COPYELM/COMPELM BEHAVIOUR INCONSISTENT PROBLEM DESCRIPTION: Quick Edit users reported that there was some strange/inconsistent behaviour when invoking COPYELM/COMPELM commands. Under some circumstances, but not all, after invoking the COMPELM or COPYELM command, the Inventory area filter and option panel, ENDIE900 might be bypassed, going directly to an element selection list or if only one element was returned, immediately performing the operation. This was the original intention of the feature - if the COPY or compare operation was invoked with NO OPERANDS then it should always result in the panel ENDIE900 being presented. If the command was entered WITH an Element name then the display should be bypassed (just like IBM's EDIT copy or compare commands - if you provide the full details, the prompt is bypassed). For IBM's command you need to provide a fully qualified dataset name, or a member name in brackets. Endevor on the other hand only needs an Element name (and optionally type) with the other inventory details coming from the CURRENT element being edited. The problems arose if there was an error message; - For example if the element were not found, or the type was invalid The panel would attempt to propagate a 'CO' operation but fail because of the pending message (but leaving a 'CO') in the command field. or ... - If the element being edited was out of Sync, then even if the Element (and optionally TYPE) were valid, an unexpected repeat of the out of sync message (SMGR164E) would appear. Yes! the element we're editing is out of Sync, but the user might be in the process of performing an COMPELM to resolve those conflicts - they don't need to be reminded. - A further bug was discovered in that while the COPYELM needs a DESTination target, COMPELM does not, but if one were specified, the user would be presented with a page of RED allocation error messages, indicating an invalid temp dataset name (".COMP) and the compare was aborted. SYMPTOMS: COPYELM/COMPELM behaviour inconsistent/unpredictable. IMPACT: Problem affects QuickEdit users trying to fast-path a copy or compare request. CIRCUMVENTION: Issue the COMPELM or COPYELM command without any parameters to always display the ENDIE900 confirmation/filter panel. PRODUCT(S) AFFECTED: CA Endevor SCM Release 18.1 Related Problem: ENDBAS 7813 Copyright (C) 2021 CA. All rights reserved. 1.   Before applying this PTF, backup any customised CLISTs
or skeletons (CSIQCLS0/CSIQISPS)
2.   After applying the PTF, review the changes supplied in
this PTF and merge/retrofit any site specific
customizations.
3.   This PTF provides a new default/sample version of the
ENUXSITE exit.  This will now check for a DD in the
for EN$DFTxx, and if found will overlay the last two
characters of the default C1DEFLTS table with the
characters (xx) from the DDname.  This should make
it easy for sites that wish to support multiple
C1DEFLTS tables to simply add an:
ALLOC FILE(EN$DFTxx) DUMMY SHR REU
Statement to their logon or startup clists so that
Endevor will automatically select an appropriate
defaults table and propagate it to any batch jobs
that are submitted through the SCMM@LIB skeleton
member.  In addition, three new processor symbols
are introduced to allow processors to also participate
``` |

Service	Details
	in with dynamically selected C1DEFLTS: &C1DFLTNM ▯ The Current Endevor C1DEFLTS name &C1SITEID ▯ The Current Endevor SITE-ID &C1CUNAME ▯ Customer name CUNAME= from the defaults 4. To take advantage of this new exit; assemble each required C1DEFLTS table, specifying the appropriate suffix in the SYSLMOD member name of the LINK step. 5. Optionally, review your processors that submit jobs to determine if they should include a //EN$DFT DD DUMMY statement.).
