S016231	S016231 M.C.S. ENTRIES = ++PTF (S016231) ADD NEW TYPE OF REP STATEMENT TO TMSUPDTE PROBLEM DESCRIPTION: When updating the EXPDT of a volume record, no testing or validating of the DSNB chains is done. The update is strictly done based on the new EXPDT value specified. This may cause un-expired secondary files to be scratched that were not intended to be scratched. SYMPTOMS: Secondary files are scratched when the volume (File-1) is scratched even if the secondary files had higher expiration dates. IMPACT: With this fix applied, a new keyword called VEXPDT is available. When VEXPDT is used, ALL the DSNB's in the chain (regardless of which volume in a chain they start on) are analyzed and the highest expiration date of any DSNB record is compared to the VEXPDT= value and the highest is used. CIRCUMVENTION: Manually check all secondary file expiration dates before updating the EXPDT value with TMSUPDTE. ENHANCEMENT DESCRIPTION: PRODUCT(S) AFFECTED: CA 1 Tape Management Version 14.0 Related Problem: 1 2371 Copyright (C) 2021 CA. All rights reserved. R00183-AL0140-SP1 DESC(ADD NEW TYPE OF REP STATEMENT TO TMSUPDTE). ++VER (Z038) FMID (CALOE00) PRE (S013615) SUP (ST13227 ST16231) ++HOLD (S016231) SYSTEM FMID(CALOE00) REASON (DOC) DATE (21042) COMMENT (<pre> +-----+ CA 1 Tape Management Version 14.0 +-----+ ***** * PUBLICATION * ***** </pre> In the Utility Guide, for the TMSUPDTE utility please add the following paragraph. A new keyword value can now be used called "VEXPDT". The VEXPDT is similar to EXPDT and will cause the EXPDT field to be updated. HOWEVER, instead of simply replacing the expiration date for the volume with the specified value the entire DSNB chain will be run (if there is one) and the highest DSNB EXPDT value OR the new VEXPDT= value will be used; whichever is highest. If there are no DSNB's or all the DSNB's are expired (have an expiration date in the past) - then this VEXPDT= value will be used as if EXPDT= had been specified. However, if a secondary file has an expiration date far into the future or a keyword value; then the highest of the DSNB's or the VEXPDT= will be used. In the Messages Guide, for TMSUPDTE messages add the following; High DSNB EXPDT date used = yyyy/ddd

Service	Details
	REASON: The VEXPDT= keyword was used on a REP statement , and a DSNB with a higher expiration date was found on the volume. That higher expiration date was used in place of the VEXPDT= value specified. ACTION: The update has taken place (unless PARM=TEST was specified) however, a higher expiration date value was used in place of what was specified.). ++HOLD (SO16231) SYSTEM FMID(CAL0E00) REASON (ENH) DATE (21042) COMMENT (<pre> +-----+ CA 1 Tape Management Version 14.0 +-----+-----+ SEQUENCE Before Apply +-----+-----+ PURPOSE Allow better control when updating EXPDT on a volume. +-----+-----+ USERS All users AFFECTED +-----+-----+ KNOWLEDGE How to use the CA 1 TMSUPDTE utility.
