Service	Details
LU00126	<p>LU00126 M.C.S. ENTRIES = ++PTF (LU00126)</p> <p>SFTP SERVER ON WINDOWS TIMES OUT</p> <p>PROBLEM DESCRIPTION:</p> <p>When using the SFTP print driver to send files to a WS_FTP windows server the transmission succeeds but does not end after the file is sent.</p> <p>A timeout eventually occurs and the SFTP command ends with a non-zero return code. This causes the CA Spool file to be held and prevents cleanup of the temporary USS files created to enable the transfer. TOENVIR=WSFTP has been added as a DRIVPRMn value. When TOENVIR=WSFTP is specified, the -p option will be removed from the SFTP PUT command. The STDOUT file will be analyzed to determine that the transmission was successful instead of the return code from the SFTP command.</p> <p>SYMPTOMS:</p> <p>Files that have been successfully transferred are in held status in CA Spool. USS files that should be deleted after a successful transfer are not deleted.</p> <p>IMPACT:</p> <p>Customers using the SFTP print drivers to transfer file to a WS_FTP windows server are affected.</p> <p>CIRCUMVENTION:</p> <p>None.</p> <p>PRODUCT(S) AFFECTED:</p> <p>CA Spool Version 14.0</p> <p>Related Problem:</p> <p>CSPOOL 2227</p> <p>Copyright (C) 2021 CA.
