

CA Top Secret Security for z/OS 16.0
CA RS 2103 Service List

1

Service	Description	Type
S016021	SYSID TRUNCATED IN ARCHIVE AND MODEL COMMANDS	PTF
S016110	TSSPROT ADD SUPPORT FOR EAV DASD	PTF
S016294	SUPPORT MFA OUT-OF-BAND, AZFCERT1, AZFPASS1, INBAND COMPOUND	PTF
S016312	ELIMINATE TSSCPF U0003 DIAGNOSTIC ABEND	PTF
S016316	CREATE WITH USING INCORRECTLY COPIES WAEMAIL ADDRESS	PTF
S016319	STORAGE DEADMAIN SP229 KEY3 USING PASSPHRASES	PTF
S016321	TSS WHOHAS DSN DATA(MASK) MISSING PERMITS WITH %	PTF
The CA RS 2103 service count for this release is 7

Service	Details
SO16021	SO16021 M.C.S. ENTRIES = ++PTF (SO16021) SYSID TRUNCATED IN ARCHIVE AND MODEL COMMANDS PROBLEM DESCRIPTION: When specifying a SYSID value containing more than four characters on a PERMIT or ADDTO command, performing an ARCHIVE or MODEL of the user results in the SYSID being truncated to four characters in the output of the command. SYSID values on CA Top Secret z/VM systems are allowed to be up to eight characters. On CA Top Secret z/OS systems, while SYSID can be specified up to eight characters, only the first four characters are looked at when processing an authorization request as the SYSID is associated with the SMFID of the system. SYMPTOMS: The SYSID value in commands generated as a result of ARCHIVE or MODEL commands are truncated to four characters. IMPACT: Executing the commands generated by the ARCHIVE or MODEL commands results in an incorrect SYSID being associated with the associated ADDTO or PERMIT command. CIRCUMVENTION: Prior to executing the commands, edit the file generated by the ARCHIVE or MODEL command to correct the SYSID value. PRODUCT(S) AFFECTED: CA Top Secret for z/OS Release 16.0 Related Problem: TSSMVS 10445 Copyright (C) 2021 CA. All rights reserved. Service	Details
SO16294	SO16294 M.C.S. ENTRIES = ++PTF (SO16294) SUPPORT MFA OUT-OF-BAND, AZFCERT1, AZFPASS1, INBAND COMPOUND ENHANCEMENT DESCRIPTION: This enhancement adds support for IBM's MFA Out-of-Band, AZFCERT1 factor, In-Band Compound feature (token + TSS password/phrase), and AZFPASS1. *IBM MFA Out-of-Band authentication* IBM MFA Out-of-Band authentication requires you to authenticate "out-of-band" with one or more factors to retrieve a cache token credential, which you then use as your password with a z/OS application. Your administrator must configure your account for IBM MFA Out-of-Band and will tell you whether you must use the IBM MFA Out-of-Band web page to log on. The administrator will provide you with the URL to use. When prompted by the IBM MFA Out-of-Band web page, you must provide the required token(s). How you obtain the required token varies by token type. You follow the same process and provide the same information as you would for these factors without IBM MFA Out-of-Band, except that you enter the credentials on the web page and not in your z/OS application. *IBM MFA Compound In-Band authentication* You can use IBM MFA Compound in-Band authentication if you require the user to authenticate inband with a combination of a SecurID token and a password. The following authentication factors support IBM MFA Compound In-Band authentication: AZFSIDP1 (RSA SecurID), AZFTOTP1 (IBM TouchToken), AZFRADP1 (generic RADIUS), AZFSFNP1 (SafeNet RADIUS), AZFSIDR1 (RSA RADIUS). *AZFPASS1 factor* You can configure IBM MFA for password authentication. IBM MFA Password Authentication is a weak factor and requires the user to enter their RACF password in addition to at least one other strong authentication factor. IBM MFA Password Authentication is supported only in IBM MFA Out-of-Band. IMPACT: Provide IBM MFA support for Out-of_band, In-Band Compound, and AZFPASS1 factor support. CIRCUMVENTION: N/A PRODUCT(S) AFFECTED: CA Top Secret for z/OS Version 16.0 Related Problem: TSSMVS 10204 Copyright (C) 2021 CA. All rights reserved. SO16312	SO16312 M.C.S. ENTRIES = ++PTF (SO16312) ELIMINATE TSSCPF U0003 DIAGNOSTIC ABEND ENHANCEMENT DESCRIPTION: TSSCPF issues a U0003 abend in cases where we receive unexpected return codes from send requests to CCI. This causes CPF to stop functioning on all attached nodes, not just the node experiencing the problem. Since CCI is responding, there is no reason to stop CPF. We are replacing this abend with an SDUMP to capture diagnostics and then go into a retry loop at thirty second intervals waiting for CCI to respond successfully. PRODUCT(S) AFFECTED: CA Top Secret for z/OS Version 16.0 Related Problem: TSSMVS 10450 Copyright (C) 2021 CA. All rights reserved.
