Then in the "Installing" manual, under the "Install and Deploy CA 1 Tape Management System" chapter, in the "Configure without CA CSM" section, update the "Install the ISPF interface" and the "Enable the ISPF Inquiry (TI) Command" sections to include the instructions on how to update the ISPF Configuration Utility, so that if desired, the customer can use I, S, or M commands instead of the TI command. They can do this by doing the following: 1. Use ISPCCONF to use your ISPF Configuration Utility 2. Select option 1 (create/modify settings) 3. Select option 3 (PDF Exits) 4. Scroll to the second-page and put a "/" to "Enable RM/Tape commands" 5. Put in %TI as the RM/Tape Command and "TMS" as the Command APPLID After you have verified the Keyword Table Contents, build the configuration table load module. Once built, you can simply steplib to the updated configuration table </pre>

LU02187	LU02187 M.C.S. ENTRIES = ++PTF (LU02187)	
	CTSUXENT - CTSQSTS TO TAKE A VOLUME OUT OF DEL/OUTSRV STATUS	
	PROBLEM DESCRIPTION:	
	Call CTSQSTS(TMSQSTS or TLMSQSTS) to take a volume out of either DELETE status or OUT-OF-SERVICE when called from CTSUXENT(CBRUXENT). Currently when a volume is entered in to a Robotic device, the user must take a CA 1 volume out of Delete status and OUT-OF-SERVICE for CA TLMS.	
	With this enhancement, the system programmer can remove a Branch instruction from CTSUXENT to allow the exit to call CTSQSTS with a new function to update the Tape Management catalog's.	
	SYMPTOMS:	
	Currently when a volume is entered in to a Robotic device, the user must take a CA 1 volume out of Delete status and OUT-OF-SERVICE for CA TLMS.	
	IMPACT:	
	Ease of use
