LU02091	LU02091 M.C.S. ENTRIES = ++PTF (LU02091) JOB JCL TRUNCATED WHEN IN-STREAM DATA CONTAINS HIGH VALUES PROBLEM DESCRIPTION: A job's JCL is truncated when the JCL contains an in-stream dataset that has high values (x'FF') in column 1 of a line. The JCL is truncated at the line containing high values. Everything after that seems to be dropped/lost. SYMPTOMS: Job is submitted with incomplete JCL. LQ command display of the JCL ends where the high values started. IMPACT: Job executes with incomplete JCL. The job may fail. CIRCUMVENTION: Use a physical dataset instead of an in-stream dataset. LU02477	LU02477 M.C.S. ENTRIES = ++PTF (LU02477) ERRONEOUS DATASET TRIGGERS - LDSN, LCTLG, FJOB COMMANDS PROBLEM DESCRIPTION: Incorrect dataset trigger information may be returned when using LDSN, LCTLG, or forecasting commands such as FJOB, FQJOB, etc. SYMPTOMS: Output from the affected commands may indicate that jobs are triggered by datasets that actually have no triggers defined. IMPACT: No impact to actual job triggering - only affects the indicated commands. CIRCUMVENTION: It may be possible to circumvent the problem by issuing a 'clearing' command prior to issuing the affected command. The clearing command is: LCTLG,DSN=ABC.D* Note that both commands should be entered on the same terminal. Restarting CA7ONL will also resolve the problem. 	SQLMEM=FREE ISOLEVEL=U TIMEOUT=1440 TIMEOUTWAIT=0 Following the updates, the Datacom Server JOB/STC must be recycled. Failure to do this may result in the CA 7 Datacom MUF becoming unresponsive due to memory constraints. As a result of this CA 7 itself will become unresponsive. REST API requests will also be unresponsive. The CA 7 Datacom MUF will need to be recycled to alleviate the problem.).
