The CA RS 2110 service count for this FMID is 2			

Service	Details
SO15687	SO15687 M.C.S. ENTRIES = ++PTF (SO15687) The following items are included in this solution: 1. EXPAND USERDATA TO 60 CHARACTERS IN JCLCHECK/JCLNEAT 2. ADDED NEW VALUE TO DD.GDGRGEN. BASE IS SET NO GEN SPECIFIED ===== EXPAND USERDATA TO 60 CHARACTERS IN JCLCHECK/JCLNEAT ENHANCEMENT DESCRIPTION: This sysmod increases the size of the USERDATA in JCLCheck and JCLNeat. For JCLCheck the size is changed to a max of 64 characters and for JCLNeat the max is 62. This affects the \$CA.USERDATA REXX variables in both JCLCheck and JCLNeat. If any exits use the \$USERDAT in JCLCheck'S \$JCLGLBL macro these exits should be reassembled and should be examined to see if the larger field will be handled properly. PRODUCT(S) AFFECTED: CA JCLCheck Release 12.0 Related Problem: JCLCHK 1703 ===== ADDED NEW VALUE TO DD.GDGRGEN. BASE IS SET NO GEN SPECIFIED ENHANCEMENT DESCRIPTION: When a GDG dataset is specified without a generation (+n) there is no indication to REXX that the file is a GDG base. This sysmod adds a new value to the JCLCheck REXX variable DD.GDGRGEN. Normally this would be a number, ie. +000 or -000. The new value 'BASE' will be set if the GDG is specified without a generation. PRODUCT(S) AFFECTED: CA JCLCheck Release 12.0 Related Problem: JCLCHK 1702 Copyright (C) 2021 CA. All rights reserved. 	* STEPS TO PERFORM *		

	This sysmod has two enhancements that may affect customization that you have made to JCLCheck or JCLNeat.		
	1. The size of the USERDATA has increased in JCLCheck and JCLNeat. For JCLCheck the size changed to a maximum of 64 characters and for JCLNeat the maximum is 62.		
	If you are not using the USERDATA option in JCLCheck or JCLNeat then you should not be affected.		
	If you are using REXX in your processing be aware that the length of \$CA.USERDATA can be larger than before. If you don't change the value of the JCLCheck or JCLNeat option USERDATA, then you should not see any changes in the REXX behavior.		
	If you are using JCLCheck exits that use the \$JCLGLBL macro, these exits should be re-assembled to get the latest version of the macro.		
	If the exit is using the \$USERDAT field in the macro, you should review the code to make sure the size change will not affect your processing.		
	2. A new value, BASE, can be received in the REXX variable DD.GDGRGEN. Please review your STDREXX programs to see if you are using the DD.GDGRGEN variable. If so, your REXX code should be checked to be sure the new value will not affect your processing. This change only affects JCLCheck STDREXX, it does not apply to JCLNeat.		
	).
