| LU02878 | <p>LU02878 M.C.S. ENTRIES = ++PTF (LU02878)</p> <p>The following items are included in this solution:</p> <ol style="list-style-type: none"> <li>1. IN LIST PERFORMANCE ENHANCEMENT</li> <li>2. WRONG ROWS RETURNED WITH CERTAIN LEFT MERGE JOINS</li> </ol> <p>=====</p> <p>IN LIST PERFORMANCE ENHANCEMENT</p> <p>ENHANCEMENT DESCRIPTION:</p> <p>This enhancement changes the way IN list predicates that reference the high-order column of an index are evaluated so that only the rows with values in the list are accessed.</p> <p>This is done by calling CBS with an EQ predicate for each IN list value. Without this optimization, the IN list is not passed to CBS where the index scan range can be restricted.</p> <p>This optimization is NOT performed if ANY of the following is true:</p> <ol style="list-style-type: none"> <li>1. There is another predicate with a high-order restriction on a different index. (It may be best to use this other index, and using both indexes would cause population counting and creating an index to eliminate rows found in both indexes, if an EQ predicate.)</li> <li>2. When the table is the inner table of a nested loop join. The join takes priority.</li> <li>3. This optimization can be used when the join is a sort-merge or hash join. (In this case, a temporary table is built and filtering is okay.)</li> <li>4. There is another index being used to satisfy GROUP BY or ORDER BY.</li> <li>5. If there are multiple IN lists referencing high-order index columns, only one IN list is optimized.</li> <li>6. In list values are not all literals.</li> <li>7. Any IN list value has a greater precision/length/scale than the column.</li> <li>8. The IN list is under an OR.</li> <li>9. The IN list is in the ON clause of a LEFT JOIN and refers to the outer/preserved table. (It's okay if in the WHERE clause.)</li> </ol> <p>Note that the IN list values are sorted, and any duplicate values eliminated.</p> <p>PRODUCT(S) AFFECTED:</p> <p>CA Datacom SQL <span style="float: right;">Release 15.1</span></p> <p>Related Problem:</p> <p>SQL 14261</p> <p>=====</p> <p>WRONG ROWS RETURNED WITH CERTAIN LEFT MERGE JOINS</p> <p>PROBLEM DESCRIPTION:</p> <p>A join with all of the following true returns too many rows:</p> <ol style="list-style-type: none"> <li>1. LEFT JOIN</li> <li>2. MERGE join method is used</li> <li>3. Duplicate join values in outer/preserved table</li> <li>4. These duplicate join values have matching rows on the inner table</li> <li>5. ON predicate(s) referencing the outer/preserved table</li> </ol> <p>When an ON predicate of a LEFT join referencing the outer/preserved table is FALSE, any matching rows should be rejected and null values returned for the inner table.</p> <p>However, when there are multiple outer/preserved table rows with the same join value, and there are also matching rows on the inner table, these matching rows are returned in error.</p> <p>SYMPTOMS:</p> <p>Too many rows are returned.</p> |

| LU03154 | <p>LU03154 M.C.S. ENTRIES = ++PTF (LU03154)</p> <p>ENHANCEMENT: NEW OPTION: EXCEPTION VISIBILITY FOR RETIX<br/>ENHANCEMENT DESCRIPTION:<br/>This enhancement introduces a new option for DBUTLTY RETIX processing. Unlike a LOAD, a RETIX does not set a non-zero condition code when duplicate keys exist for a table defined with one or more unique keys or a master key not allowing duplicates. With this enhancement a new option is introduced, which allows for a user-defined condition code to be set in case of such duplicates. The option is as follows:<br/>SET OPTION1=ENABLE_EXCEPTION_VISIBILITY=n<br/>Where n is the condition code to be set in case of a duplicate key exception and must be coded as 1, 2 or 3. Coding 0 turns off exception processing. For detailed documentation of this new option, refer to the release notes.<br/>PRODUCT(S) AFFECTED:<br/>CA Datacom/DB Release 15.1<br/>Related Problem:<br/>DB 15064<br/>Copyright (C) 2021 CA. | LU03295 | <p>LU03295 M.C.S. ENTRIES = ++PTF (LU03295)</p> <p>1000 RESTORE PROCESSES INVALID ENTRIES IN KEY TABLE</p> <p>PROBLEM DESCRIPTION:</p> <ol style="list-style-type: none"> <li>1. Performing a 1000 RESTORE via DDUPDATE can process bad key entries in the KEY table in Data-Dict. These bad key entries will contain a blank in the SEQUENCE_NUMBER. This is caused by some pre-existing 'bad' keys in said table.</li> <li>2. When copying a table to PROD, either explicitly or as part of a higher structure, a relationship orphan is created. This solution may also potentially prevent other types of orphans.</li> <li>3. ALIAS orphans were not being properly counted on an Orphan Report unless the DELETE option was used.</li> <li>4. Orphan Report returned a RC=0 even when you have found orphans.</li> </ol> <p>SYMPTOMS:</p> <ol style="list-style-type: none"> <li>1. The following ERROR can occur when attempting to add a key back because it is attempting to match on the invalid key:<br/>DDPVK30001 KEY RECORD NOT FOUND</li> <li>2. A relationship orphan is created.</li> <li>3. 'Orphans Found' would show '0' for ALIAS orphans.</li> <li>4. RC=0 when orphans are present in the Dictionary.</li> </ol> <p>IMPACT:</p> <ol style="list-style-type: none"> <li>1. The KEY entity cannot be added.</li> <li>2. Orphans can cause problems with future updates to DataDictionary causing them to fail. The problems that can arise are varied greatly.</li> <li>3. This could cause one to think that there are no ALIAS orphans that need deleting.</li> <li>4. A RC=0 is misleading when orphans are present and now gives a RC=4 as a warning indicator that orphans need to be deleted to ensure a healthy Dictionary.</li> </ol> <p>CIRCUMVENTION:</p> <ol style="list-style-type: none"> <li>1. None.</li> <li>2. Use DDUTILITY Orphan Report to find and delete existing orphans.</li> <li>3. None.</li> <li>4. None.</li> </ol> <p>PRODUCT(S) AFFECTED:</p> <p>CA Datacom Datadictionary <span style="float: right;">Release 15.1</span></p> <p>Related Problem:</p> <p>DD 14866</p> <p>Copyright (C) 2021 CA.
