ENTRIES = ++PTF (LU03513) IMPROVE TARGET SYSTEM SECURITY CHECKING PROBLEM DESCRIPTION: Target system security is being strengthened to use the highest security specified in OPS/MVS parameter, SECURITYSCOPE, from both sides of the cross-system request. SYMPTOMS: It is possible that the SECURITYSCOPE parameter value on the target system of an OPS/MVS cross-system request will have a less secure value than the value of the SECURITYSCOPE parameter from the sending system and will be used to validate the request. IMPACT: Unintentional access to OPS/MVS facilities from a cross-system request. CIRCUMVENTION: Insure that the value of the parameter SECURITYSCOPE is the intended value on all OPS/MVS MSF connected systems.
