Service	Details
LU02572	LU02572 M.C.S. ENTRIES = ++PTF (LU02572) FASTCOPY SUPPORT FOR IEBCOPY APAR OA60639 PROBLEM DESCRIPTION: IBM APAR OA60639 provides new function in IEBCOPY to copy PDSE Member Generations. A new parameter is added to both the COPYGRP and COPYGROUP statements: GENS=ALL or GENS=NONE. This PTF adds support for OA60639 to FastCopy. GENS=ALL support is valid only for COPYGRP and COPYGROUP and is supported for all PDSE libraries. GENS=ALL COPYGRP and COPYGROUP operations allow selection of current member names only and the operation copies the current member and all of its previous generations. This PTF also enhances FastCopy to support selection of data-only PDSE Generation members on any statement that supports the MEMBER= parameter. The syntax requirements are identical to the syntax documented for PDSMAN Multiple Member Version Support. Refer to the FastCopy, Library Space Reuse, and FastStow Facilities guide section FastCopy Usage Notes Multiple Member Version support topic for details. Copy of data only PDSE previous generations proceeds as follows when using member selection (not GENS=ALL): * Previous generations are copied in oldest to newest order, for example -3, -2, -1, current member. * STOW into the output library always specifies the current member with the system's previous generation support creating the older generations as the operation proceeds. * Copy of previous generations with a NEWNAME operand also results in STOW in the output library specifying the current generation of the specified NEWNAME. Support for selective copy of generations is much the same as support for PDSMAN minus version members with the following exceptions: * Selective copy is provided only for data PDSE libraries (not program objects). This is due to limitations placed on access and update operations to program object libraries. * Only PDSE with generations copy to PDSE with generations support is provided. * PDSMAN MMVS (Member Multiple Versions) copy to PDSE with generations (and vice versa) is not supported. The FastCopy EDITDIR command also supports PDSE generations with the following considerations: * When DELETE MEMBER= specifies a current generation all previous generations that may be present for the current member are also deleted. * For RENAME MEMBER=(oldname,newname), if the oldname member is a current generation then previous generations, if present, are deleted after the rename operation. * When using the RETAIN command specify M=memname(*) if you want to retain the memname member and all of its previous generations. This PTF adds a new FastCopy message: FC0121W GENS keyword ignored - reason

Service	Details														
	The GENS= keyword is ignored for one of the following reasons. The operation procedes without previous generations and return code 4 will be issued. * PDSE generations copy support is not installed Required DFSMS maintenance is not installed. * Input or Output does not have Gens enabled Either the input or the output library does not have PDSE generations enabled. This fix also adds new error reason codes to message FC0415A: * PREV GEN COPY REQUESTED BUT INPUT AND OUTPUT DO NOT SUPPORT PDSE GENS * EDITDIR RENAME OF PDSE GENS VALID ONLY FOR A CURRENT GEN * BOTH GENS=ALL AND PREVIOUS MEMBER GENERATION SELECT ARE NOT SUPPORTED SYMPTOMS: None IMPACT: None CIRCUMVENTION: None PRODUCTS AFFECTED: CA PDSMAN PDS Library Management r7.7 Related Problem: PDSM 14647 Copyright (C) 2022 CA.
