PROBLEM DESCRIPTION: When optional feature MSGSEVERITY_C1G0296 is set to W, a RETRIEVE action may proceed even though the LRECL of the output file is shorter than the record length specified in the type definition. However, the behavior is different depending on the record format of the output file. If the output file has RECFM=V, the first record that is too long raises U0001 abend with code=RECL. SYMPTOMS: A job with a RETRIEVE SCL, RECFM=V file and a LRECL that is too short fails with a U0001 abend. The action is not executed. IMPACT: The job abends.
