LU05311	LU05311 M.C.S. ENTRIES = ++PTF (LU05311) GSVX552W REFERENCING CLIST VARIABLE IN AN IF PROBLEM DESCRIPTION: In a CLIST or CAPTURE member, referencing a CLIST parameter variable like &1 in an)IF statement does not work. The)IF statement gets processed as the member is read in, and any CLIST variables have not yet been defined at that point. This only affects variables that are created to represent parameters passed on the CLIST command, whether the CLIST command was issued by a user or via an event capture triggered from a threshold or the CAPTURE command. Other variables such as &SYSNAME already exist and are substituted properly on an)IF statement. SYMPTOMS: Referencing a CLIST parameter variable (&n) in an)IF statement does not work and produces a message similar to the following: GSVX552W Variable not defined - &1 IMPACT: Cannot use parameters passed to a CLIST on an)IF statement. CIRCUMVENTION: None. LU05548	LU05548 M.C.S. ENTRIES = ++PTF (LU05548) ALLFILES INFORMATION AREA DUMMY INPUT FIELD PROBLEM DESCRIPTION: PTF LU02191 added a new AllFiles field as a dummy input field in the information area of the following SYSVIEW commands: - JOUTPUTW - LISTFILE - OUTPUT This fix will change the AllFiles field in the information area to no longer be an input field. The AllFiles field can still be cursor selected to toggle the value of the setting. SYMPTOMS: The AllFiles field in the information area of the impacted SYSVIEW commands appears as a dummy input field. This causes the TAB and NEWLINE actions to place the cursor on the AllFiles field. IMPACT: Using TAB or NEWLINE actions will place the cursor on the AllFiles field. CIRCUMVENTION: None.
