Service	Details
LU05566	LU05566 M.C.S. ENTRIES = ++PTF (LU05566) ZERT NOT REPORTING TLS/SSL PROTECTION IN CCISSLGW OR CCISSL PROBLEM DESCRIPTION: When z/OS Encryption Readiness Technology (zERT) is used to monitor a CCISSLGW or CCISSL connection, the report always shows that the connection has no recognized TLS/SSL protection, even after a successful handshake. The reason is that CCISSLGW and CCISSL receive data from the socket before the handshake, but zERT is never notified about the handshake, which is done using the System SSL API. Generally, if a TCP/IP application does not invoke the handshake immediately after the initial socket connection, zERT must be notified to start monitoring the TLS/SSL protection. This PTF will add an API call in CCISSLGW/CCISSL to notify zERT before each handshake. Note: zERT is an optional reporting tool that must be enabled in the TCP/IP stack to utilize it. SYMPTOMS: In zERT record: X'00': No recognized cryptographic protection IMPACT: None. CIRCUMVENTION: None. PROBLEM RESOLUTION: Deploy updated CAW0PLD, refresh LLA if necessary and restart CCISSLGW/CCISSL.
