LU06032	LU06032 M.C.S. ENTRIES = ++PTF (LU06032) S013-C0 ABEND OPENING CEEOPTS DD ON JES3 SYSTEM PROBLEM DESCRIPTION: When Deliver started task is active in a pre-spool environment or View system extensions is active, open of CEEOPTS DD * data set by IBM Language Environment Services results in S013-C0 abend on JES3 system. For subsystem data sets, which include SYSOUT, SYSIN (DD * and DD DATA), and SUBSYS data sets, the View/Deliver SVC interface reissues the open SVC to receive control after the data set is physically opened. That extra SVC causes JES3 to reject the open of the CEEOPTS data set and abend. The View/Deliver SVC interface will be changed to filter out the DD * and DD DATA type data sets before they are opened to eliminate the additional open SVC. To activate this APAR on an active system, one Deliver started task will have to be restarted with PARM=REFRESH. SYMPTOMS: Application job abends with S013-C0 abend when Language Environment runtime options are provided in CEEOPTS DD * data set on JES3 system. IMPACT: Cannot use CEEOPTS DD * data set in JES3 environment when Deliver and/or View active. CIRCUMVENTION: None. The 'x' in the message is the panel language code which may be R for English, C for Canadian-French, D for Danish, or G for German. When MAILTO=CSSMTP is set for the database you can send a text Sysout, Report, or Job by email via CSSMTP using View, if the correct Mail Dest is passed on Email Attribute Panel or set using MAILDEST parameter in SARINIT for CSSMTP server. To email text output in the Sysout, Report, or Job Selection List, enter E in the Select column of the output you want to email and press enter to display the Email Attributes Panel. Alternatively, enter E or EMAIL on the command line of any browse panel. With this enhancement, you can also add a message for the receiver of the email and you can include the Sysout, Report, or Job in the email, either inline or as an attachment, in TXT format. To configure the email process, administrators need to set the initialization parameter MAILTO, and optionally also set MAILFROM and MAILDEST initialization parameters.
