Service	Details
LU05782	LU05782 M.C.S. ENTRIES = ++PTF (LU05782) SET ERROR IF EXEC PARM HAS URT NAME LONGER THAN 8 CHARACTERS PROBLEM DESCRIPTION: When executing an application job with a URT name longer than 8 characters specified as a PARM on the JCL EXEC statement, the first 8 characters are used and no error condition is set. This solution will mark the invalid URT name with an asterisk (*) under column 1 and force an abend S806 (module not found). SYMPTOMS: The wrong URT may be used if the first 8 characters specify a valid URT name. The syntax error is not detected and handled. IMPACT: The application job can use the wrong URT and thus cause other errors, including possibly affecting data integrity. CIRCUMVENTION: Specify the correct 8 character URT name on the EXEC statement. PRODUCT(S) AFFECTED: DATAKOM/DB Release 15.1 Related Problem: DB 16981 (C) 2022 Broadcom Inc and/or its subsidiaries; All rights reserved R01028-DCM151 DESC(SET ERROR IF EXEC PARM HAS URT NAME LONGER THAN 8 CHARACTERS). ++VER (Z038) FMID (CABDF10) PRE (LU03981) SUP (LT05782)

Service	Details
LU05859	LU05859 M.C.S. ENTRIES = ++PTF (LU05859) INTERNAL ERROR CODE (047) INSTEAD OF (001) WITH RC 04 PROBLEM DESCRIPTION: An application using an ID command (REDID, RDUID, REDLE or RDULE) to retrieve data rows, can legitimately get an RC 04 (INVALID RECORD ID), if the row has been deleted since the record id was initially retrieved. In certain cases the internal return code is set to 047 (X'2F') when it should be 001. This can occur when the following conditions are met for the row being retrieved. 1) It resides in a compressed table. 2) There has been an update which caused the compressed image of the row to no longer fit in its current data block, so that the row was moved to a different block. 3) Following the maintenance which moved the row, this same row is subsequently deleted before the ID type command to retrieve it is issued. SYMPTOMS: An application issuing an ID type command receives an RC 04(047) when it should receive an RC 04(001). IMPACT: 1. Both an SVC and a PXX dump are produced for an RC 04(047). This would not be the case for an RC 04(001). 2. If the application program does not treat all RC 04's the same, it may result in an unexpected return code which the application is not prepared to handle. CIRCUMVENTION: None. PRODUCT(S) AFFECTED: DATAACOM/DB Release 15.1 Related Problem: DB 16982 (C) 2022 Broadcom Inc and/or its subsidiaries; All rights reserved R01032-DCM151 DESC(INTERNAL ERROR CODE (047) INSTEAD OF (001) WITH RC 04). ++VER (Z038) FMID (CABDF10) PRE (LU00189 LU03981 LU04999 R091632 R092259 R092858 R093647 R094095 R096260 S001597 S005882 S010748) SUP (AR96260 LT05859 R090397 S007405 S013425 S014911 S015008 ST07405 ST13425 ST14911 ST15008 TR90397)

Service	Details
	<pre> ACCESS REQUIRED Ability to run DBUTLTY and DDUPDATE. +-----+-----+ ***** * STEPS TO PERFORM * ***** 1. Run the following DBUTLTY function to prepare taking the DSTs offline: ACCESS STATUS=UTLTY,DBID=1000,USERS=WAIT 2. Followed by a DBUTLTY: COMM OPTION=CONSOLE,OPTION2='SYSTEMDBID_DELETE' 3. Followed by a DDUPDATE using the new BTG1000 member as input to catalog the new definition. 4. Followed by a DBUTLTY which allows MUF to resume DST activity with the new definition: ACCESS STATUS=WRITE,DBID=1000 An example and details can be found in the "System Tables Reference" in the Datacom Core - 15.1 TechDocs space. Apply this SYSMOD using 'BYPASS(HOLDSYSTEM(ACTION))' . The entire process can be run at your convenience, any time the DST database can be closed. The existing Dynamic System Tables continue to function and return data, without cataloging the latest DST definition. If the entire DST database cannot be closed, the new DST can be added using the table level DSTMPA member using the process documented in the "Update the Dynamic System Tables Definitions", "Adding a New Dynamic System Table", in the "System Tables Reference" in the Datacom Core - 15.1 TechDocs space.).</pre>
