	ENABLE SYSVIEW PRODUCT PTF ANALYSIS
	PROBLEM DESCRIPTION:
	This PTF will enable you to use a feature in SYSVIEW called Product PTF
	Analysis. This PTF delivers an element that contains metadata for all
	published PTFs for ACC.
	Any subsequent PTF published after this PTF will contain its own PTF
	tracking element metadata.
	What is Product PTF Analysis?
	Product PTF Analysis combines PTF tracking elements from your run-time
	XML library with maintenance data found in your product SMP/E
	installation CSI library. Product PTF Analysis provides the ability to:
	* Determine the PTFs and APARs currently applied.
	* View detailed descriptions of published PTFs.
	* Using the Cross System component, you are able to compare the PTFs
	applied on each LPAR.
	* Detailed SYSMOD information can be viewed from the SMP/E CSI data set
	used during installation and maintenance.
	Product PTF Analysis shows this information for all Broadcom Mainframe
	products that have the necessary XML data available. Please note that
	not every product will update XML data for all prior and new fixes at
	the same time. Consult each product's documentation for more
	information.
	How can I view Product PTF Analysis?
	SYSVIEW 16.0 Feature PTF LU03153 added a Product PTF Analysis feature
	that performs an analysis of product SMP/E CSIs and PTF tracking
	metadata. A PTFS command was added to SYSVIEW 16.0 with PTF LU03153
	that performs the analysis. For more information, see the "New Features"
	page on the SYSVIEW Tech Docs Portal here:
