Service	Details
LU06734	LU06734 M.C.S. ENTRIES = ++PTF (LU06734) CATALOG DOES NOT UPDATE ACCESS-METHOD FOR MODELLED SEQ DVW PROBLEM DESCRIPTION: When CATALOG DVW determines that a dataview was built using the file model, and represents a sequential file, it does not update that information in the ACCESS-METHOD attribute of the DATAVIEW entity. This is because a dataview with that attribute is assumed to have source on VLS (unmodelled) and a re-catalog would thus fail. The ACCESS-METHOD is insufficient as a test, and DBMS-USED should indicate the source of the field information. SYMPTOMS: DISPLAY INDEX DATAVIEW does not show modelled dataviews as QSAM. IMPACT: Minor. The INDEX discrepancy could be considered cosmetic-only. CIRCUMVENTION: None required.
