SYMPTOMS: SJVRTTRM tries to POST outstanding SJV callers. The POST will fail when the caller's address space is already gone or the TCB of the caller is gone. If the POST fails, SJVRTTRM attempts to issue an informational message via a WTO. The WTO fails with abend S0F8-4 because it is being issued in SRB mode. 	RACF ADMINISTRATION NO LONGER REMOVES ELEVATION
	PROBLEM DESCRIPTION:
	Issuing RACF administration against an elevated user can cause the
	user to lose active elevation permissions.
	SYMPTOMS:
	If RACF administration is performed while a user is elevated,
	the user may lose elevated permissions until a RACROUTE REQUEST=AUTH
	is performed, which will restore active elevations to the user.
	IMPACT:
	The user will lose elevated permissions until a RACROUTE REQUEST=AUTH
	is performed.
	CIRCUMVENTION:
	Avoid performing RACF administration on elevated users. If
	administration is necessary and the user loses active elevations,
	the user can perform an action which will drive a
	RACROUTE REQUEST=AUTH, such as opening a dataset.
