LU06427	LU06427 M.C.S. ENTRIES = ++PTF (LU06427) PWPHRASE CHANGE DONE THROUGH A COMMAND MAY GET ERROR MESSAGE PROBLEM DESCRIPTION: When a user attempts to change their own PWPHRASE through a command, either ACF or ACFUNIX, they could get a strange error message. The error message is unpredictable. This will occur if the user already has a PWPHRASE set and either they are past the GSO PWPHRASE MINDAYS time to be able to change their PWPHRASE or the PWPHRASE user profile record has PWP-EXP set. The MINDAYS field has to be non-zero for this to happen. The error message is produced by us using the low order byte of your current TOD for your current PWPHRASE and using that as the message number. for instance if your TOD=x'D824ABEF', we will use the x'EF' to create the message. This will produce message ACF00239. Also updated by this fix is the handling of the GSO PWPHRASE MINDAYS value. No matter what the MINDAYS is set to the SHOW PSWD output may show: MINDAYS = 255 MINIMUM NUMBER OF DAYS REQUIRED TO ELAPSE BEFORE PWP CHANGE And the following message has the same incorrct 255 number. ACF00135 NEW PASSWORD PHRASE NOT SET - CURRENT PASSWORD PHRASE MUST BE KEPT FOR 255 DAYS SYMPTOMS: The change command gets an invalid message. IMPACT: Cannot change your own PWPHRASE.
