LU05220	LU05220 M.C.S. ENTRIES = ++PTF (LU05220) EXTEND PASSWORD LENGTH FOR AUTOSYS CROSS-PLATFORM SCHEDULING ENHANCEMENT DESCRIPTION: Password length for AutoSys Cross-Platform job scheduling (CA7TOUNI jobs and XPJOBS) is increased to a maximum of 32 bytes. Sites that use CA7TOUNI or XPJOBS to send jobs from one CA 7 instance to another CA 7 instance are still limited to 8 character passwords. Sites that use CA 7 to send cross-platform jobs to the UUJMA agent are still limited to 14 characters. 	<pre> USERS Users who submit CA7TOUNI or XPJOBS from CA 7 to Autosys AFFECTED +-----+-----+ KNOWLEDGE SMP/E, System Administrator REQUIRED +-----+-----+ ACCESS SMP/E, Datacom Administrator REQUIRED +-----+-----+ ***** * STEPS TO PERFORM * ***** Three specific actions are required. First, the Common Services Cross-Platform Scheduling Common Component PTF LU05199 must be applied in conjunction with this PTF for full functionality. Failure to apply LU05199 concurrently will limit you to using 14 character passwords for CA7TOUNI jobs and XPJOBS (cross-platform jobs) sent from CA 7 to Autosys. Failure to install LU05199 on all LPARs that can receive CA 7 job requests can result in ROUTER outages. Second, the new sample JCL job, AL2DBI07, supplied with this CA 7 PTF must be modified and executed to rename reserved CA 7 Datacom field names to support the extended password. This can be done while CA 7 is up. Third, Autosys boxes will need an Autosys patch to enable this enhancement. - Apply patch 99111433 for AutoSys 11.3.6 SP8 CUM1 - Apply patch 99111513 for AutoSys r12 SP1 CUM2 - AutoSys r12 SP1 CUM3 patch 99111412 already has this fix. - AutoSys r12.1 release is inclusive of this fix.).</pre>

When a dataset name is created by a task more times than specified by DCRC within the specified DCOI, the dataset will be considered critical and the following WTO will be issued: CAL2108I DSN data-set-name Task task-name critical The dataset will become non-critical if the number of creations by the task does not exceed the DCRC for 5 consecutive intervals. ENTRIES = ++PTF (LU06883) SPECIFY HOST NAME FOR TCP/IP TERMINAL INTERFACE SERVER PROBLEM DESCRIPTION: Sites wanting to automate TCP/IP terminal interface failover to another LPAR cannot currently do so. Any applications using the TCP/IP terminal interface must be restarted with the new CA 7 TCP/IP local host address. A new keyword, TCPTHNAM, is being added to the UCC7VTAM statement that allows sites to enter the IP Address or Domain Name they want associated with CA 7. This change will enable sites to use dynamic virtual IP addresses to access the TCP/IP terminal interface. SYMPTOMS: Sites must manually restart REST API applications that use the TCP/IP terminal interface when CA7ONL failover occurs. IMPACT: Sites must manually restart their REST API applications.
