LU07137	LU07137 M.C.S. ENTRIES = ++PTF (LU07137) ALLOW ADD/UPD ON SIGNED IN ELM IF USING FINGERPRINT PROBLEM DESCRIPTION: When using REST API (and by extension, any of the newer interfaces), a user needs override signout authority to modify a signed-in element. This is inconsistent with Quick Edit, where they don't need it. This PTF removes the need for override signout, if the REST API caller specifies a fingerprint during the update action. This allows interfaces using the safe way of updating elements to avoid the need to override signout while still keeping it in place as a protective mechanism for plain update actions that can potentially revert changes to the element. SYMPTOMS: C1G0168E message while attempting to update a signed-in element via REST api without the override signout option. CIRCUMVENTION: If the user is authorized to override signout, add the override signout parameter. Or sign out the element before attempting an update.
