## Endevor SCM 19.0 CA RS 2211 - PTF LU07409 Details

| Service | Details  |
|---------|--|
| LU07409 | LU07409 M.C.S. ENTRIES = ++PTF (LU07409)   |
|         |  |
|         | (E)REST API: STC POOL FIX + NEW CHECK + APIML WITH KEYRING   |
|         | FEATURE DESCRIPTION:   |
|         | 1) A new diagnostic endpoint to support Endevor Web Services   |
|         | installation and validation:   |
|         | <pre><protocol>://<host>:<port>/EndevorService/api/v2/<config>/check</config></port></host></protocol></pre> |
|         | 2) Fix a defect in STC pooling logic:  |
|         | When the pool is at maximum size and a new request arrives, it may   |
|         | cause a temporary deadlock, waiting for the whole ConnectionTimeout  |
|         | duration even if an STC becomes available sooner   |
|         | 3) Fix ECSA fragmentation in the underlying CCI interface:   |
|         | When STC pooling is on, abandoned internal control blocks slowly   |
|         | accumulate in the ECSA of the Endevor WS Tomcat address space  |
|         | 4) Fixes to API ML registration  |
|         | - Add missing SSO support via dynamic registation  |
|         | - Allow the use of a SAF keyring as the keystore/truststore for API ML                                       |
|         | 5) Other minor fixes   |
|         | - Fix internal error when credentials contain userid longer than 8 chars                                     |
|         | - Fix internal error when Basic auth used with incorrectly encoded base64                                    |
|         | - Fix a Type ID error for the ELEMENT/TYPE actions with the TYPE ID > 99                                     |
|         | 6) New validation for RETRIEVE ELEMENT action in REST API v2   |
|         | - Message EWS1264E will be issued if 'noSignout' parameter is used   |
|         | in REST API v2 RETRIEVE ELEMENT action. 'signout' should be used instead                                     |
