The overlay can cause unpredictable errors, including failure with RC 02(021) (INVALID TABLE NAME), a loop or abend in the Datacom/DB Multi-User Facility (MUF). This solution protects against this memory overlay and the overlay is corrected by SQL PTF LU07736. SYMPTOMS: RC02(21), a loop or an abend in MUF are possible during SQL ALTER TABLE. IMPACT: The ALTER TABLE cannot be processed and MUF may need to be cycled. CIRCUMVENTION: None. SYMPTOMS: Rows added with DBUTLTY MASSADD are not correctly backed out after an error. IMPACT: Rows are not backed out when they should. LU07828	LU07828 M.C.S. ENTRIES = ++PTF (LU07828) REWORK(2022319) RARE BUFFER OVERLAY CAUSING RETURN CODE 13(019) PROBLEM DESCRIPTION: An application can receive a return code 13(019) (internal index error) or other less common random errors may occur due to a buffer overlay. This can occur when changing the block size of an index or data area under the following conditions: 1. An index or data area has been initialized and populated with a block size. 2. This index or data area has been opened and used in an instance of the Datacom/DB Multi-User Facility (MUF) using a private Buffer Pool. 3. The affected database is then closed and taken offline. 4. An offline process changes the block size to be larger than the original block size. 5. The database is reopened in the same instance of MUF where it originally had the smaller block size. 6. The MUF buffer pool in which the affected index or data area resided prior to the close, was defined with a block size less than the current block size. Typically this occurs when the private Buffer Pool was right sized to the original block size. Rather than failing the OPEN in a too small Buffer Pool, a buffer can now overlay part of the following buffer, causing the return code 13. SYMPTOMS: The application receives return code 13(019) or other less common random errors. IMPACT: One or more application requests are unsuccessful due to the error. CIRCUMVENTION: Avoid using a private Buffer Pool with a smaller buffer size under these circumstances. Change the buffer pool specification for the affected area prior to bringing it back online. Other URT OPEN errors are likely to end with the same symptom. SYMPTOMS: DBUTLTY RECOVERY ends with the following messages: DB00501E - OPEN ERROR - RETURN CODE 76 (002) CXX=name (aaannnnn) DB00102I - ENDED JOB-job-name NUMBER-jjjjj \$HASP395 job-name ENDED - RC=0000 where aaa is the area name, nnnnn is the DBID and jjjjj is the run unit number. After this solution has been applied and then the corresponding base containing the VSAM dataset has been physically (re)-opened in the Datacom/DB Multi-User Facility (MUF), the "SECONDARY CYLS" in the CXX report will show the correct allocation quantity. The CXX report itself does not physically open the corresponding base.
