LU08462	LU08462 M.C.S. ENTRIES = ++PTF (LU08462) REWORK(2022343) MESSAGE DB347051 IS UNCLEAR PROBLEM DESCRIPTION: Message DB347051 is issued when an SQL transaction has attempted to access tables through multiple schemas and those schemas have been defined in such a way that two or more local areas map to the same physical area in the DMCL. The schemas can be a referencing schema for either a network-defined, an SQL-defined schema or a non-referencing SQL schema. Physical areas must only be accessed under one SQL schema within a transaction. This PTF updates the definition of the message to more clearly state the reason and action. SYMPTOMS: SQL transactions issue message DB347051, followed by IDMS abend code 1188. Batch jobs will end with U3134. IMPACT: The SQL transaction fails. CIRCUMVENTION: When referencing multiple network referencing schemas, separate references to each schema into a separate transaction.
