Service	Details
LU08446	LU08446 M.C.S. ENTRIES = ++PTF (LU08446) REWORK(2022343) MISSING DBRC COMMANDS WHEN MULTIPLE FUNCTIONS USED PROBLEM DESCRIPTION: The IMS Tools common components for stacking and sending DBRC commands may lose some commands when storing many of them. This happens when the buffer for commands is full and IMS Tools use the extended buffer. When the next function from control statements starts processing, the track of extending the buffer is lost along with generated commands. SYMPTOMS: The control statements input stream in the xxxCTRL DD contains multiple FUNCTION= keywords. The requested functions issue many DBRC commands that are reported in xxxMSGs DD or JESMSGLG output. The utility terminates with a return code of 0, but succeeding functions override commands generated by the previous function. Various DBRC flags are incorrect and the database is not usable. IMPACT: IMS Tools utilities do not send all generated DBRC commands after execution. The utility reports successful termination, but the required functions are not complete. CIRCUMVENTION: Split functions in the control statements input stream into several steps. Then resubmit the job.
