LU08317	LU08317 M.C.S. ENTRIES = ++PTF (LU08317) REWORK(2022343) NEW OPTIONAL FEATURE SEC_RETRIEVE_WITH_SIGNOUT ENHANCEMENT DESCRIPTION: This enhancement introduces a new option in the ENCOPTBL table, SEC_RETRIEVE_WITH_SIGNOUT, which affects security behavior. When this option is enabled, an additional security call is made during the retrieve element action, unless the "NO SIGNOUT" option was specified. This additional security call involves: - Calling exit point 1 with the exit control block field ECBFUNC (assembler) and ECB-ACTION-CODE (COBOL) set to "9 - SIGNOUT". - Calling the ESI security control point with the value of the ESI keyword "MENUAUTH" and of its synonym keyword "ACTION" both set to "SIGNOUT". This option allows the definition of security rules to control access to the retrieve action based on the "NO SIGNOUT" option. That is, based on whether the master record of the retrieved element is to be modified.
