LU09427	LU09427 M.C.S. ENTRIES = ++PTF (LU09427) REWORK(2023087) ABEND0C7 SMFIDSXM+074E PROBLEM DESCRIPTION: An index processing error during the SMF dump process can result in an index block having a free space count less than zero. This occurs when an index entry ends exactly at the end of an index block. The error does not show up as an issue right away. It manifests when the next dump process completes for that configuration. An ABEND0C7 occurs during the index update process. SYMPTOMS: The error appears as follows: CAF2899T RUN ABENDED SYSTEM=0C7, IN SMFIDSXM+00074E A diagnostic snap is produced by SMF Director. IMPACT: All subsequent dump process runs for that configuration will fail with the same abend code. Dump processes on other configurations will run successfully. The correction here is only preventative. If this error is encountered, the only way to resume dump processing is to run a RESTORE of the SCDS from the last BACKUP of the SCDS before the last successful dump process was run. Once the RESTORE completes, history files that have been dumped since the BACKUP was run can be added to the index via the usual methods for adding external SMF data to the index. CIRCUMVENTION: None. PRODUCT(S) AFFECTED: SMF Director Release 12.7 Related Problem: JARSSM 19890 (C) 2023 Broadcom Inc and/or its subsidiaries; All rights reserved R00084-ASF127 DESC (ABEND0C7 SMFIDSXM+074E). ++VER (Z038) FMID (CASFC70) PRE (LU03800 LU04587 R068923 R076087 R097894) SUP (DC68249 LT06325 LT09427 LU06325 S008722 ST08658 ST08722 ST09754) MCS LU09427 STARTS ON PAGE 0002
