LU08780	LU08780 M.C.S. ENTRIES = ++PTF (LU08780) REWORK(2023066) ARCHIVETRIGGER VALUE NOT VALIDATED PROPERLY PROBLEM DESCRIPTION: OPINAR does not properly validate the value of the ARCHIVETRIGGER parameter at OPS/MVS product initialization or at OPSLOG Archive component restart. This PTF corrects how validation of the ARCHIVETRIGGER parameter is performed: - When INITARCH=NO, no validation takes place. - When INITARCH=YES, (2.1) Validation takes place. For the validation that happens at OPS/MVS product initialization, a new message OPS8337T records the validation failure into OPSLOG. (2.2) The initialization of the OPSLOG Archive component terminates if ARCHIVETRIGGER contains an invalid value. SYMPTOMS: - OPS/MVS validates the value of ARCHIVETRIGGER even though INITARCH=NO, and these messages may appear if ARCHIVETRIGGER is null: OPS9500S ABEND X'000C3000' in ARCH initialization/termination OPINAR+X'000020F6' detected at OPINAR+X'000002F6' OPS9990I CA OPS/MVS ABEND 0C3000 detected at OPINAR+000020F6 - When INITARCH=YES, (2.1) ARCHIVETRIGGER is not validated at OPS/MVS product initialization. (2.2) At OPSLOG Archive component restart and if ARCHIVETRIGGER is null, these messages may appear: OPS9999T ARCHPROC - Trigger parameter = 0 OPS83360 ARCHIVETRIGGER parameter is invalid: 0 IMPACT: Possibility of OPSLOG Archive not being executed. CIRCUMVENTION: Set ARCHIVETRIGGER to a valid value in OPSSPA00 start-rexx for OPS/MVS product initialization, or in OPSVIEW panel 4.1.1 for restart of the OPSLOG Archive component.
