LU09372	LU09372 M.C.S. ENTRIES = ++PTF (LU09372) REWORK(2023101) S913 ABEND DURING GENERATE AFTER NAME REGISTRATION WARNING PROBLEM DESCRIPTION: Whenever Quick Edit GENERATE processing displays an ENDIE410 panel to warn about an element name registration error of severity W or C (for example an element with the same name is present in a different subsystem) and the user hits ENTER to continue, an S913 abend arises. The accompanying violation message shows that the Endevor message data set (ddname C1#xTMPR) is being opened under the alternate ID. SYMPTOMS: An S913 abend occurs and Quick Edit GENERATE processing is halted. IMPACT: GENERATE action is not successful. CIRCUMVENTION: Perform the generate action in Quick Edit using batch mode. LU09536	LU09536 M.C.S. ENTRIES = ++PTF (LU09536) REWORK(2023117) MISSING / INCORRECT INFORMATION IN REPORTS FROM LOAD MODULES PROBLEM DESCRIPTION: There are two separate but related issues being seen in Load Module reports. These are: 1. When a Load module is added to Endevor as an element and then browsed, the LOAD MODULE INFORMATION SUMMARY is displayed. If a load module is added from a PDSE, that is, it is a program object, then the LOAD MODULE INFORMATION SUMMARY has two errors: - The CSECT sizes are rounded up to a multiple of eight. - The dates and translator information are missing for some objects. The LOAD MODULE INFORMATION SUMMARY shows the correct information for load modules that have been added from a PDS. 2. The API listing of footprints using LIST DIRECTORY does not get all of the complete footprints in a load module. The footprint information is printed correctly in the REPORT80 output. SYMPTOMS: All program object CSECTs are marked as entry points with a size of 0 and an incorrect date. All program object CSECT sizes are rounded up to a multiple of eight, and some modules have missing dates and translator information. Footprint information is missing for some CSECTs in the LIST DIRECTORY API output. IMPACT: The user cannot use Endevor to analyze the program object's metadata. CIRCUMVENTION: If possible, copy the program object to a PDS before adding it to Endevor. ENTRIES = ++PTF (LU09577) REWORK(2023102) USING RECENTLY DEFINED ENTITY MAY CAUSE 'NOT DEFINED' ERROR PROBLEM DESCRIPTION: If an entity is defined immediately before it is used, Endevor may post an error stating that the entity is not defined. For example, the DEFINE PROCESSOR GROUP statement may result in error ENBE079E (Type xxxx is not defined) if it runs right after the DEFINE TYPE action that defines the type xxxx. SYMPTOMS: An error message states that the recently defined entity is not defined. For example, ENBE079E Type is not defined. IMPACT: The entity that was recently defined cannot be processed. CIRCUMVENTION: Run the statement that defines an entity and the statement that uses the entity in separate ENBE1000 steps. 	DATA CORRUPTION COULD OCCUR IN ACMQ FILES (ACMROOT/ACMXREF)	
	PROBLEM DESCRIPTION:	
	Data corruption could happen in ACMQ files (ACMROOT/ACMXREF). When corruption happens, incorrect relationships between an element and its related components are recorded. Subsequent utilities that rely on results from ACM database, such as ACM Query and AUTOGEN, may result in incorrect output.	
	SYMPTOMS:	
	Incorrect output for ACM related utilities, such as ACMQ query or AUTOGEN.	
	IMPACT:	
	ACM related utilities don't work, or produce incorrect results.	
	CIRCUMVENTION:	
	Rebuild ACM files completely.
