LU09371	LU09371 M.C.S. ENTRIES = ++PTF (LU09371) REWORK(2023103) S913 ABEND DURING GENERATE AFTER NAME REGISTRATION WARNING PROBLEM DESCRIPTION: Whenever Quick Edit GENERATE processing displays an ENDIE410 panel to warn about an element name registration error of severity W or C (for example an element with the same name is present in a different subsystem) and the user hits ENTER to continue, an S913 abend arises. The accompanying violation message shows that the Endevor message data set (ddname C1#xTMPR) is being opened under the alternate ID. SYMPTOMS: An S913 abend occurs and Quick Edit GENERATE processing is halted. IMPACT: GENERATE action is not successful. CIRCUMVENTION: Perform the generate action in Quick Edit using batch mode. LU09504	LU09504 M.C.S. ENTRIES = ++PTF (LU09504) REWORK(2023115) EXPORT PACKAGE SCL SHOULDN`T REQ THE USER TO BE AN APPROVER PROBLEM DESCRIPTION: When package security is set to Approver security, the Export Package action via Endevor batch, Endevor API, or any of the interfaces based on the API (Web Services, CLI, etc) requires the user to be a package approver for any packages that are not in-edit. However, the equivalent action in ISPF to display package SCL has no such limitation. This fix removes the inconsistency by allowing batch and Endevor API callers to export a package regardless of their approver status. SYMPTOMS: The same user is allowed to see the package SCL in ISPF, but denied to obtain the same package SCL via all other Endevor interfaces. IMPACT: Inconsistently enforced security rule can lead to confusion about package SCL visibility. New interfaces based on web services cannot display the same information ISPF can. For example, the DEFINE PROCESSOR GROUP statement may result in error ENBE079E (Type xxxx is not defined) if it runs right after the DEFINE TYPE action that defines the type xxxx. 	DATA CORRUPTION COULD OCCUR IN ACMQ FILES (ACMROOT/ACMXREF)	
	PROBLEM DESCRIPTION:	
	Data corruption could happen in ACMQ files (ACMROOT/ACMXREF). When corruption happens, incorrect relationships between an element and its related components are recorded. Subsequent utilities that rely on results from ACM database, such as ACM Query and AUTOGEN, may result in incorrect output.	
	SYMPTOMS:	
	Incorrect output for ACM related utilities, such as ACMQ query or AUTOGEN.	
	IMPACT:	
	ACM related utilities don't work, or produce incorrect results.	
	CIRCUMVENTION:	
	Rebuild ACM files completely.
