LU10009	LU10009 M.C.S. ENTRIES = ++PTF (LU10009) REWORK(2023136)	
	ACCESS SUBCOMMAND MAY NOT PROCESS NEXTKEY RULE PROPERLY	
	PROBLEM DESCRIPTION:	
	There is a possibility of getting incorrect output from the ACCESS subcommand when the command has to process nextkeys. The problem happens when the address of the workarea for the ACCESS command and the address for the rule buffer becomes a negative number when the 2 addresses are added together. The easiest way to tell if this is the case for the incorrect output is the "Prefix: SYS1" line will be missing from the output for a nextkey rule when there is a \$PREFIX in that rule.	
	SYMPTOMS:	
	Incorrect output.	
	IMPACT:	
	Cannot run ACCESS command.	
	CIRCUMVENTION:	
	None.	
	PRODUCT(S) AFFECTED:
