ENTRIES = ++PTF (LU10179) REWORK(2023135) SMF RECORD COUNT IN AUDIT REPORT TRUNCATED TO NINE DIGITS PROBLEM DESCRIPTION: With each new release of z/OS, more and more SMF records are being produced, leading to larger counts of records being dumped into the SMF Director History Archive and Extracted from the SMF Director History Archive. Currently the upper limit in the reports produced by SMF Director for record counts is 999,999,999. Any extract or dump of one billion records or more has the high-order value truncated. SYMPTOMS: In a dump or extract of over one billion records, the high order digits will be lost in the record count column of the summary report. IMPACT: An inaccurate count of records is displayed due to truncation from the left. CIRCUMVENTION: The AUDITREPORT control statement can be used to generate a file with the raw data used to produce the report. There is no truncation in the fields in the raw data. The raw data is mapped by the SMFMROUT member located in the CASFMAC library.
